

Market shares are not given. They are taken.

**Whatever you do with steel,
with Ruukki you can do it better.**

Our experts are only a phone call away

Ruukki aims to maintain the competitiveness of our customers' core processes and to develop them throughout their lifecycles.

That is why we like to start cooperation by doing a survey on the present situation. During this survey, our experts go through the customer's current ways of operating, material usage and requirements set by end-products. This survey helps us to identify together with the customer how and where we can develop business further.

So let's sit down together and take a look at your situation. Then we will be able to address your needs and meet your expectations. Or actually exceed them.

Conquer markets by developing more competitive processes and advanced products. We can give you what it takes: high-quality wear-resistant Raex-steel, reliable deliveries and fresh ideas for you to develop your products and processes. All combined with expertise and a great service attitude.

An excellent steel in many forms, Raex

Raex is Ruukki's advanced wear-resistant steel with high resistance to abrasive wear, surface pressure and strain. The excellent surface quality and dimensional accuracy of products made from Raex, supported by our diverse product offering, enable you to create totally new designs and optimise production processes.

Our customers value the good cutting, bending and welding properties of Raex, which makes workshop treatment easier and processing more efficient. Join our many other customers, who have made the most out of Ruukki and Raex to design lighter, more durable products and develop more efficient production processes.

Raex is available in plate, strip and tubular form and even as parts and components ready for assembly.

Set the time and place – we deliver

Your company does not pay just for the materials. It also pays to ensure the right material is in the right place at the right time.

Did you know that Ruukki is considered to be the most reliable steel producer in Europe? Our unrivalled supply chain and customer-specific storage services guarantee fast, timely, flexible deliveries. Ruukki's delivery accuracy also allows you to manage your production processes better.

All steel products and services from Ruukki

Our offering in wear-resistant steels is complemented by a uniquely broad range of other steel products and services. Ruukki can also supply you with ultra-high-strength steel in plate, tube and profile form – or even as parts ready for assembly. Together with our material and applications knowledge, this ensures a comprehensive product and process development.

By working with Ruukki, you also benefit from our full-range of prefabrication services, which allow us to supply our customers with ready-for-assembly parts or components delivered to their doorstep.

Ruukki aims to be the leading supplier of metal-based solutions in Europe to customers in construction and in the lifting, handling and transportation equipment industry. We have operations in 26 countries and employ 14 300 people. As our customer, you can access all our know-how and experience.

Why compromise? Ruukki's unrivalled, consistent operations ensure that you get everything from one partner.

See how other companies have boosted their business

Take a look at how we have helped our customers to upgrade their applications and develop more competitive processes. This will hopefully inspire you with new ideas on how to do the same in your company.
